

MANIFESTO OF THE URBAN MUSEALIZATION

Lecturer PhD. Arch. Raluca DIACONESCU*

Abstract

*Urban musealisation is linked with urban spaces, with their identity, with the representation of space in the historic urban trail integration and continuity of this space in the city. Residents living their historic space perceive it in a way of interpretations going through it and being with him. The various manifestations of urban space archeology shed some past relationship with this consciousness leaving traces on space redefined it, redefining its routes, approaches and what is most helpful: transformations. Historic space change in another sense, other directions in other ways than an empty space of meanings and traces of it in the consciousness of those who are defining through it. Otherwise it's all about re-interpreting **the meanings of empty space toward a space defined by the past.***

Keywords: *urban museum, identity space, archaeological space in the town or in relation to town, urban destiny*
